## 2. Citations and explanations (Rule 70.7)

**The claimed invention**

The claimed invention relates to the problem concerning fluctuating PAPR (Peak to Average Power Ratio) in an OFDM system.

The problem is solved by from a set of pilot configurations choosing the one that optimises the PAPR.

**Prior art**

In The International Search Report the following documents were cited:

D1: US 5 381 449

D2: EP 1 056 250

D3: EP 1 061 705

D4: WO 0 156 239

D5: IEEE 1999, Wakutsu et al.: "A novel carrier frequency offset estimation scheme for OFDM systems utilizing sub-carrier"

D6: WO 0 152 441

D1 describes a multi-subchannel N-level QAM communication system, in which peak to average power ratio is reduced by pre-selecting amplitude and/or phase angles for the pilot symbols. This minimises the peak to average power ratio of the composite QAM signal that is transmitted. (See abstract.)

Documents D2-D6 represent the prior art. The claimed invention is not considered to be anticipated by these documents.

**Supplemental Box**

In case the space in any of the preceding boxes is not sufficient.

Continuation of: Box V

**Statement of reason**

This report is based on new claims filed after the Written Opinion.

The cited documents represent the general state of the art. The invention defined in claims 1-13 is not disclosed by any of these documents.

The cited prior art does not give any indication that would lead a person skilled in the art to the claimed communication methods and apparatus. Therefore, the claimed invention is not obvious to a person skilled in the art..

Accordingly, the invention defined in claims 1-13 is novel and is considered to involve an inventive step. The invention is industrially applicable.
